DocuWare is a proven enterprise content management system. Paired with the StapleWare® Web Client Integration module, link DocuWare to any software application.

No Screen Mapping Required

Link your applications to DocuWare by simply highlighting the text you want to capture with your mouse--for example, an invoice number in your accounting system--then press a hot key and all of the related documents from DocuWare appear. Or use OCR to capture the information--either way, the text can exist anywhere or any place in the third-party application. *And you don't have to worry about different monitor resolutions!*

Link DocuWare to Any Application

Some customers have several different software applications they use every day. Wouldn't it be nice to simplify the integrations to DocuWare? *For example: The Accounting department uses Microsoft ® Outlook and Excel, plus their accounting system and manufacturing system. With WebClient Integration, create 1 hot-key integration to link DocuWare to all 4 software applications.*

Simple Deployment and Training

Assign a function key (F1 – F12, 0-9, A-Z) to use as a hotkey for executing the integration. Assign a Combination Key (Ctrl, Alt, Shift) with the Function Key for executing the integration.

Benefits

- 1 integration for all applications
- Easy to setup - no screen mapping
- View documents from any application
- DocuWare Cloud Compatible

Applications

- Accounting
- Human Resources
- Customer Service
- Sales
